Greetings!

NEW WEBSITE RELAUNCH FOR MXOTECH

FEATURES SHAREPOINT, REPORTING AND OTHER NEW COMPANY OFFERINGS

MXOtech today announced the relaunch of its website at www.mxotech.com, to introduce the Company's expanded service portfolio and case studies of recent work for clients on portals such as SharePoint, large enterprise software applications, and other services that round out its long-standing capabilities in network management and software development.

Joanna Sobran, MXOtech president and co-founder, commented on the expanded site as "more reflective of our ability to help clients use technology to their competitive advantage." Increasingly, according to Sobran, businesses and organizations have been seeking MXOtech's help across a broader but often interdependent range of technology and IT services, including application development for large enterprises as well as professional services and mid-sized business; reporting solutions; business and customer portals; and hosting solutions. Accordingly, MXOtech has expanded and grown its staff to include expertise across these solutions, while maintaining its corporate mission of combining cutting edge technology with the most responsive service.

The site contains specific case studies of clients, large and small, who have turned to MXOtech for resolution of their technology and business issues. SharePoint portals, hosting solutions, and evaluation and implementation of reporting systems are among the examples. Also being introduced is MXOtechNet, a new offering for smaller and mid-sized businesses, providing the round-the-clock support of a virtual IT department for a highly affordable, set monthly fee.
